

Dear RES-Q+ partners, colleagues, supporters and friends,

We are bringing you a new issue of the RES-Q+ Newsletter summarizing our activities in March. You will learn what meetings we are planning, or where to find records from the past lectures.

You will also have opportunity to meet another two members of our RES-Q+ team, Jovan and Mauro from CHINO and learn more about their story.

Thank you for your great work and cooperation.

Your project management team

Today we would like to introduce the CHINO men, Jovan and Mauro.

Jovan Stevovic, CEO and Co-founder of Chino and a globetrotter. Jovan, thank you for taking the time to talk to me.

1) Where are you from and where do you live?

Complex question. Originally from Serbia, I grew up in Rovereto, a beautiful town of the very northern Trentino region in Italy, where I studied and started my career. Currently most of my time I'm in Berlin and Italy.

2) What was your journey to becoming a lawyer?

Well actually I'm a PhD in Computer Science. I became an expert in data protection, privacy and security while working in healthcare field and doing research and innovation projects in Trentino and US at HP Labs in California. I got passionate so much that I started creating my own ideas for start-ups, and one of those was awarded in 2014 at the Idea Challenge from EIT Digital. The project was presented by myself together with my friend and colleague Stefano Tranquillini. We quit our jobs and started working on Chino.io, and here we are today, almost 20 people team working with most innovative institutions and start-ups across Europe and abroad.

3) What is your most unusual talent?

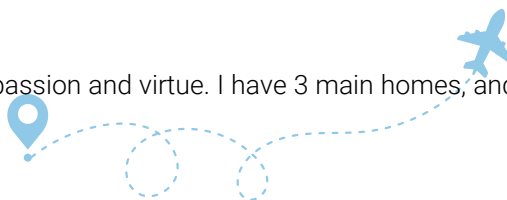

I've been a football referee for 11 years in Italy reaching national categories. It was an amazing experience that taught me many lessons, such as how to manage stress and deal with pressure in chaotic and complex situations. Those lessons are helping me in daily life nowadays, where I need to lead a small company.

More professionally related, my unusual talent at Chino is the combination between legal and tech and my Computer Science background. With mine (and my co-founder's) expertise we are able to help companies to build innovative data driven products and ensure privacy and regulatory compliance. This requires tech foundations and legal knowledge.

4) What are your hobbies?

Traveling definitely. I started very young due to necessity, but now it's a passion and virtue. I have 3 main homes, and many others in Europe and abroad.

The second gentleman we'd like to introduce is Mauro, European Projects Manager and a true Italian. Thank you, Mauro, for sharing some information about you with us.

1) Where do you live and what do you love most about that place?

I live in Reggio Emilia in Northern Italy, a city whose relatively small size I like, the fact that it's in an area where the food is traditionally good and with hospitable people.

2) Why did you choose cyber security?

Since I was little, I have always liked working on the computer. Obviously at the age of 9 I used it more to play than for anything else, but within a few years the internet then began to spread in Italy and therefore I began to use it to explore the world. A passion became a profession.

I started getting interested in hacking techniques and also in what the countermeasures are, becoming then a consultant in cyber security and auditor in ISO 27001.

3) Is there something unusual you'd like to try and haven't yet?

The thing that would make me most enthusiastic would be to drive a Formula 1 on the Monza circuit and visit Japan.

4) What are your favourite leisure activities?

One of my greatest passions is definitely reading and traveling whenever possible.

Prepared by Eliska Stravova, ICRC

Administrative information

All partners have funding for the first 2 years in their accounts

The first payments have been sent to all partners by March 10. Please confirm to Petra Hrstkova, Admin Manager (hrstkova@qualityregistry.org), that you have received the payment if you have not done it yet. Thank you.

Monthly reporting needed

We kindly remind the task leaders, legal partners and clinical partners to fill in a short report at the end of each month in the [project tracker](#). This serves as a source of information on the project progress and as an input for discussion at monthly online meetings.

Ethics Board has been established

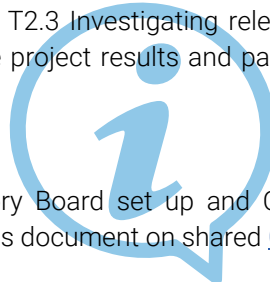

The Ethics Board (EB) of the RES-Q+ project was established, consisting of three members, prof. Anne Gerdes (Denmark), Dr. Mary Joan MacLeod (UK) and Mgr. Radek Halouzka (Czechia), nominated by General Assembly members. EB will address issues related to the involvement of patients in research activities, the protection of personal data and the use of AI in healthcare. The EB will provide inputs to project strategy, compile annual Ethics Reports as part of the ethics deliverables in WP10 and contribute to T2.3 Investigating relevant legal and ethical aspects in Work Package 2. It will receive periodic updates about the project results and participate in the annual meetings of the RES-Q+ consortium.

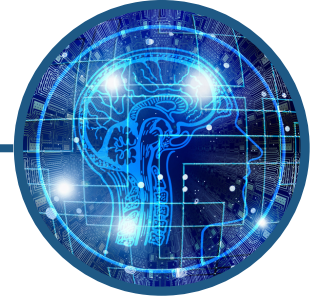

Deliverable submitted

The ethics deliverable 10.1 OEI - Requirement No. 9: Ethics Advisory Board set up and CVs was successfully submitted March 31 as a part of WP10. You can find final version of this document on shared [Google Drive](#).

Deliverables in progress

We are working on 3 deliverables to be submitted at the end of April: the 1st version of the Plan for Dissemination and Communication Activities (D8.3), the 1st version of the IPR Management Plan (D8.4) and the 1st version of Data Management Plan (D9.9). All these documents are considered as the first versions and will be updated during the lifetime of the project.

Highlights from the dissemination tracker

We are proud to announce our partners Hendrik Knoche (Aalborg University), Oliver Lemon (ALANA) and Robert Mikulik (IHIS, ICRC) co-organizers of the Intelligent Data-Driven Health Interfaces workshop in Hamburg, April 23-28. The workshop has been accepted into the program of the 2023 ACM CHI Conference on Human Factors in Computing Systems and will focus on the key questions of RES-Q+: How clinicians and patients interact with data when assisted by conversational or virtual assistants?

The workshop will be attended by professionals from 11 countries. More information about the workshop including all accepted position papers can be found here: <https://lnkd.in/edYKfgnC>.

During Brain Awareness Week, our consortium was happy to share the news about our RES-Q+ project, which leverages Artificial Intelligence (AI) to help improve stroke treatment. To spread the word, we posted it on social media and showcased a video clip of Robert Mikulik talking about the project: <https://youtu.be/fLoCF-j6xSM>.

Planned Meetings

PSC face to face M6 meeting

May 22 2023 10 AM - 5 PM CET
Munich, Germany

RES-Q+ face to face M12 meeting

October 25 - 27 2023
Athens, Greece

Regular Meetings

PSC monthly meeting

(everyone is welcome to join)

every 1st Friday of the month 12 PM CET
online, <https://cesnet.zoom.us/j/97721064676?pwd=VXc5dFd2QzNVSWdtQk5pVjh6dVFhQT09#success>

WP1 meeting

(designing new technologies)

alternates between **every 3rd Wednesday/Friday** of the month 2 PM CET

WP2 meeting

(legal aspects)

every 1st Wednesday of the month 11:30 AM CET
online

WP3 meeting

(interoperability)

every last Friday of the month 10 AM CET
online

WP4 meeting

(NPL pool)

every 2nd Friday of the month 10 AM CET
online

WP6 meeting

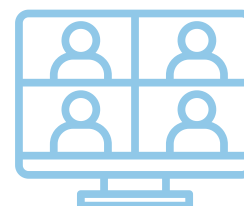

(AI virtual assistants)

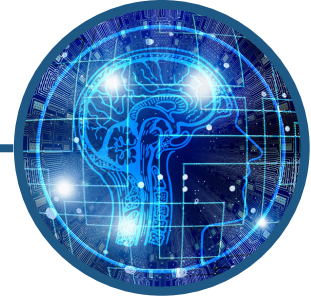

every 2nd Thursday of the month 3 PM CET
online

WP9+10 meeting

(Project management+Ethics)

every even Monday 2 PM CET
online

Passed Meetings

Prof. Philippe Ryvlin - EBRAINS

Prof. Philippe Ryvlin presented EBRAINS - 2013-2023 EU flagship project focused on digital neuroscience and Medical Informatic Platform. For those who would like watch the record, it can be found [here](#). Possible cooperation between Medical Informatics Platform and RES-Q+ was outlined at the end of the presentation.

Glossary

Several often-used abbreviations in our project documents for your better understanding:

DMP **Data Management Plan** - describes the data management cycle for the data to be collected, processed and generated by Horizon Europe projects. The RES-Q+ DMP will be submitted on 30 April. This will be the first version of the DMP, which could be modified during the project implementation.

PROMs **Patient Reported Outcomes**
